

Changelog

This changelog lists every released version of Backend Booking, the most recent first.

This page is generated automatically from the product's changelog file when a release is made. Changes made by hand are lost at the next synchronisation.

Version 1.0.7 – 16 August 2026

Fixed

- The links in the overview panel always led to the German manual. They now follow the configured language.
- The panel shown after the installation named licence version 2. It now shows the GNU General Public License version 3 or later, as everywhere else.

Version 1.0.6 – 12 August 2026

Changed

- Some of the files shipped still named licence version 2. Everything now uniformly states the GNU General Public License version 3 or later.

Version 1.0.5 – 31 July 2026

Changed

- The extension is licensed under the GNU General Public License version 3 or later. All details on licence, author and copyright are consistent.

Fixed

- The licence file shipped named a different product and contained only a short notice instead of the full licence text.

Version 1.0.4 – 31 July 2026

Added

- After an installation or update an overview panel appears with version, status and entry points to getting started, download key and manual.
- A click on "Enable updates" leads straight to the update sites, already filtered to missing download keys.
- The extension manager now shows the list of changes behind the version number.

Changed

- Notices about the state of the booking overview or about DPCalendar being disabled now appear in the overview panel instead of loosely beside it.

Language

- All messages shown during installation and update are available in German and English.

Version 1.0.3 – 29 July 2026

Fixed

- One-click updates failed with "checksum verification failed". The download key is now passed in the form the update server expects.

Version 1.0.2 – 29 July 2026

Language

- A consistent product name "Backend Booking" without mixed languages, in the German plugin list as well.

Version 1.0.1 – 29 July 2026

Added

- The adjusted booking overview is managed automatically: installation and update set it up, uninstalling removes it again.
- An overview you adjusted yourself is never overwritten or deleted in the process, only reported.
- The installation checks beforehand whether DPCalendar version 10 or newer is present, and stops with a clear message otherwise.

Version 1.0.0 – 29 July 2026

Added

- Initial release.
