JCE editor (Pro)

> **Pro version.** This feature is part of the Pro version of Fileshelf. What the Free version does is covered under *Free version and Pro version*.

If you work with the JCE editor (2.9 or newer), pick downloads right in the link dialog. The plugin **JCE - Fileshelf links** adds Fileshelf to the dialog; the button *Fileshelf* below the editor (see *Editor button*) works in JCE as well.

Inserting a link

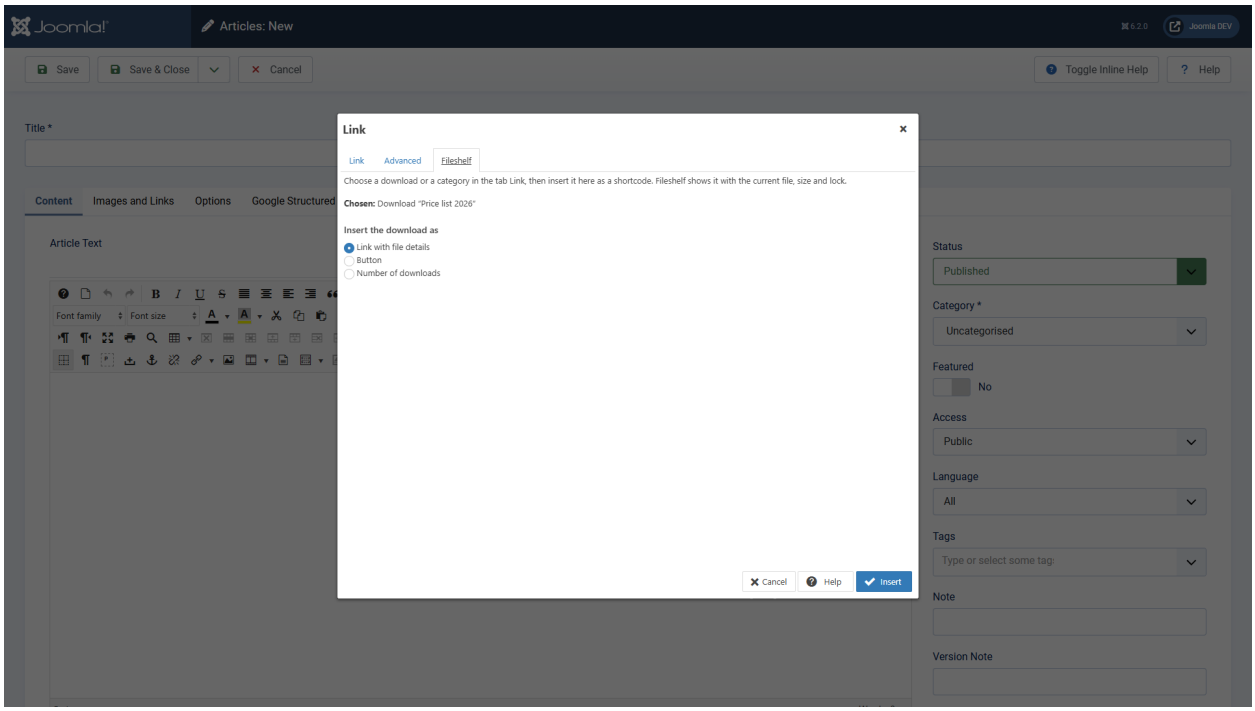

Select the spot or the word in the text, open the link dialog and expand **Fileshelf** in the tree. Below the categories you find the downloads; a click takes over the link. It always goes through Fileshelf – with counter and access check –, never straight to the file. You only see categories and downloads you may see yourself.

The Fileshelf tree in the link dialog.

Inserting a shortcode

Instead of a plain link, the tab **Fileshelf** inserts a shortcode: choose a download or a category in the tab *Link*, switch to the tab *Fileshelf* and choose the form – for a download link with file details, button or number of downloads, for a category list or cards. **Insert** puts the shortcode into the text; Fileshelf shows it with the current file, size and lock (see *Shortcodes in articles*).

The “Fileshelf” tab.
