YOOtheme Pro (Pro)

> **Pro version.** This feature is part of the Pro version of Fileshelf. What the Free version does is covered under *Free version and Pro version*.

With YOOtheme Pro you design download areas in the page builder. Fileshelf brings **dynamic content** and an element of its own. Without YOOtheme Pro the plugin **System - Fileshelf for YOOtheme Pro** does nothing.

Dynamic content

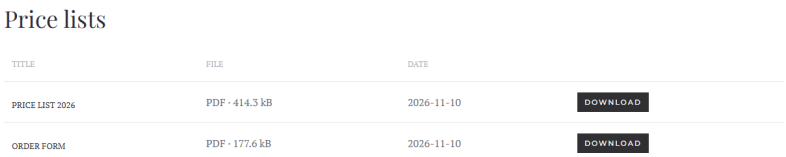

Choose one of the sources of the group **Fileshelf** under *Dynamic Content* of an element:

- **Fileshelf download** – one download you choose;
- **Fileshelf downloads** – the downloads of one or more categories (also as additional category), featured only if you like, with order and quantity;
- **Fileshelf categories** – the categories below a category, with the number of their downloads.

A download offers title, description, link to the download page, **download link**, file type and size, version, category, earlier versions and – for locked downloads – the **lock text** and the **way past the lock** (password, login, membership), among others. The download link is empty as long as the visitor may not load the file; bind the lock text to a field next to it. Access and lock reasons are the same as on the pages of Fileshelf.

The element “Fileshelf Downloads”

For a ready list, drag the element **Fileshelf Downloads** onto the page. It shows the downloads of categories, the featured, the newest or the most downloaded ones – as list, cards or table, with button or lock as on the pages of Fileshelf.

The element as a table.
